IMPORTANT NEW BOOKS FROM HARPER & ROW

A sweeping examination of power and its relationship to values, analyzing leaders and followers in climactic events of global history. "Only James MacGregor Burns could have written this stunning book. I know of no other work that so successfully integrates what are usually divergent and competitive approaches to the social sciences: biological, historical, institutional, psychological and behavioral." — M. Brewster Smith

ISPP BOOK EXHIBITS

ROOM 406

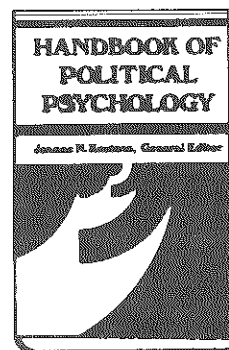

Beginning this year, ISPP is maintaining an exhibit room which will display books of interest to political psychologists which have been submitted by publishers and related organizations. Orders may be placed on a convention discount basis in accord with individual publisher policies. The room will be open from 9:00-4:30 on June fifth and sixth, and from 9:00-1:00 on Saturday, June seventh. Our exhibits director, Harve C. Horowitz, will be available to answer all inquiries.

The Directory of Exhibitors cited below is a partial listing, reflecting only those publishing houses reserving display space in advance of this program announcement.

"The literature on psychology and politics has been scattered throughout many different political science, psychology, and sociology journals and texts. Consequently, the student of political psychology did not have a central source to which he could turn. The *Handbook of Political Psychology* is the most comprehensive effort to date to supply such a source and, as such, is a symbol of the growing maturity of the field" — *Contemporary Psychology*.

"A well-conceived and executed contribution to the general literature on political science. The essays provide uniformly extensive descriptions and analyses of basic psychological and social psychological concepts, the development of their applications to political science, reviews of the relevant research, critiques of the present theoretical and empirical state of the art, and, not the least, projections of future development and expected research results" — *Sociology*.

"This volume must be considered classic in its comprehensiveness. The sixteen chapters, contributed by most of the significant figures in this field, cover virtually every aspect of political psychology" — *American Reference Books Annual*.

TAKING LIVES

Genocide and State Power

Irving Louis Horowitz

Life and death issues are uniquely fundamental, since they alone serve as a precondition for the examination of all other issues. Life and death questions move us beyond an abstract, formalist framework. This study gives substance to the social scientific imagination and demonstrates that the present underlying preoccupations of social research give scant consideration to basic issues of life and death, in favor of distinctly derivative ones.

Professor Horowitz asserts that genocide is not a sporadic or random event, nor is it necessarily linked to economic development or social progress. Genocide is a special sort of mass destruction conducted with the approval of the state apparatus. Utilizing genocide as the focal issue, he derives a new typology of social systems, which distinguishes eight types of societies within a framework of state power rather than cultural systems. Horowitz views genocide as a totalitarian technique for achieving national solidarity, ultimately resulting in a state without compassion and law without justice.

The work has been so thoroughly revised and expanded as to merit its new title. *Taking Lives* has entirely new chapters on bureaucracy and state power, genocide and the human rights movement, and problems of individualism and collectivism in the life taking process. References have been expanded and updated, and the text entirely rewritten and newly integrated.

Horowitz alerts us to a key question concerning sociological death, well in the tradition of Durkheim, Weber, Sorokin, and Mills . . . He grapples with . . . the most fundamental issues of sociology . . . his typology of human groups is most interesting . . . But the most important contribution is the delineation of the sociological significance of genocide—not its psychological, biological, ecological, or moral significance but its sociological significance. George A. Hillery, Jr., professor of sociology, Virginia Polytechnic Institute and State University

Irving Louis Horowitz is a neo-Jeffersonian. Not, indeed, an heir to the optimistic sentimentality which sometimes masquerades as Jeffersonian thought, but a true disciple of the realist who understood what power was about, refused to believe in the good faith of the privileged, and coupled passionate belief in human freedom with acute awareness of its fragility in a world ruled by men who were both power hungry and stupid. W. R. Brock, *Journal of American Studies* (1979)

Irving Louis Horowitz has located the paramount feature that distinguishes one society from another. No one can evade his challenge to judge a society by the number of people it kills. *Taking Lives* is written with literary grace by a brilliant scholar and committed moralist. It is the kind of book that changes one's world view. It makes one proud of sociology in its broadest and finest sense. Charles C. Moskos, professor of sociology, Northwestern University

Stone Age Crisis

by Burton G. Burton-Bradley

Stone Age Crisis: A Psychiatric Appraisal is the product of Dr. Burton-Bradley's experience as Chief of the Division of Mental Health Services in Papua New Guinea from 1959 to 1974. As the first and, for the most part, only psychiatrist serving two and a half million people, he was in a unique position to record the social and psychological effects of Western culture on that small island country. He writes with unusual insight about cargo cults, the causes and incidence of suicide, the phenomenon of *running amok*, the status and life-styles of mixed-race persons, and the problem of treating mental disorders among nonliterate peoples. In short, his book is an important contribution to the field of transcultural psychiatry.

Dr. Burton-Bradley, a native of Australia, holds degrees in tropical medicine and anthropology from the University of Sydney and has an M.D. from the University of New South Wales. The author of many scientific articles and research manuals, he has also contributed to a number of books, including an encyclopedia of Papua New Guinea. In 1974 he was co-recipient of the Benjamin Rush Bronze Medal Award of the American Psychiatric Association.

Stone Age Crisis, based on the Abraham Flexner Lectures given at Vanderbilt University in 1973, has recently been published in a Japanese translation by Seiwa Shoten Co., Ltd., of Tokyo.
