

Meta-Analysis of Secondary Transfer Effect of Intergroup Contact

Dear ISPP members,

Together with Tom Pettigrew I am starting to gather materials for a meta-analysis of the secondary transfer effect of intergroup contact. This effect involves a reduction in prejudice against a second group that was not involved in the initial intergroup contact (Pettigrew, 2009, *Secondary transfer effect of contact*, *SOCIAL PSYCHOLOGY*, 40, 55-65).

We would greatly appreciate your sending any articles, published or unpublished, you have that checked on this effect to: frank.asbrock@psychologie.tu-chemnitz.de

Thank you in advance for your help.

Frank Asbrock
