

Request for Unpublished Studies for Meta-analysis (Values & Political Attitudes)

Dear colleagues,

My name is Dr Ron Fischer and I am currently supervising a MSc student (Moritz Fischer) who is conducting a meta-analysis on the association between personal values and various political attitudes and behaviors. Given the current replication concerns in psychology and the issues of file drawers and replication failures, we are keen to get as many unpublished studies as possible. We would like to ask if you were able to provide us with unpublished studies or research in progress which we may not have yet access to.

In particular, we are looking for any papers or data that used a version of Schwartz' values (measured with the Schwartz Values Questionnaire SVS or any version of the Portrait Value Questionnaire PVQ) and included some political variables such as political orientation (left vs. right or liberal vs. conservative), voting, right-wing authoritarianism (RWA), social dominance orientation (SDO), prejudice, stereotypes, racism, patriotism, or similar variables related to political attitudes/behavior. We would really appreciate if you could send us your unpublished manuscripts. If you have unpublished data, we would appreciate if you could send us information on the measures used, sample sizes, Cronbach's alpha for all the values, the participants (gender balance, students or other samples, age distribution, etc.) and political behaviors/attitudes as well as the relevant correlation matrix between values and political behaviors/attitudes.

We will share the final manuscript with all authors that have contributed data or unpublished studies. We really appreciate your help and support.

Any questions, please do not hesitate to contact us.

Thank you very much in advance for your help.

Best

Ron Fischer & Moritz Fischer
